Did you know this about Elephants?

AGI catalog
Cause 18

There are two extant elephant species: the African bush elephant, also known as the African savannah elephant (*Loxodonta africana*), and the Asian elephant (*Elephas maximus*). While the African elephants are closely related, the Asian elephant is quite distinct.

- **Ears** The African elephant's ears are much bigger than those of its Asian cousin, extending above the shoulder. It's said that the former's ears are the same shape as Africa, while the latter's look like India.
- **Tusks** Both male and female African elephants grow long tusks, but only male Asian elephants do (and not all males). Some female Asian elephants grow 'tushes' - barely visible, stumpy tusks.
- **Head** African elephants have more rounded foreheads, while Asian elephants have twin domes on their heads with an indent in the middle.
- **Trunk** The tip of an African elephant's trunk has two fingers or 'lips'; the Asian elephant's trunk only has one.
- **Back** While the African elephant's back is concave (with a small hollow in it), the Asian elephant's is convex (slightly domed).
- **Size** In general, African elephants are larger. Adult males weigh up to six tonnes, while male Asian elephants usually weigh no more than five tonnes.

Elephant Origami!

Let's Learn about Sea Turtles

Sea turtles are fascinating creatures with great determination and instincts. Learn more about the solitary and challenging life of a sea turtle to appreciate these reptiles and understand how to help protect them.

While each species of sea turtle looks a little different in color and size, there are things they all have in common.

- Sea turtles have been on earth so long, they lived during the time of the dinosaurs.
- There are seven species of sea turtle: flatback, green, loggerhead, hawksbill, leatherback, olive ridley and Kemp's ridley.
- An adult sea turtle can be two to six feet long, depending on the species.
- The largest sea turtle ever seen weighed over 2,000 pounds.
- The smallest adults weigh around 60 pounds.
- Unlike land turtles, sea turtles can't tuck their head or flippers into their shell.
- Sea turtles have claws.

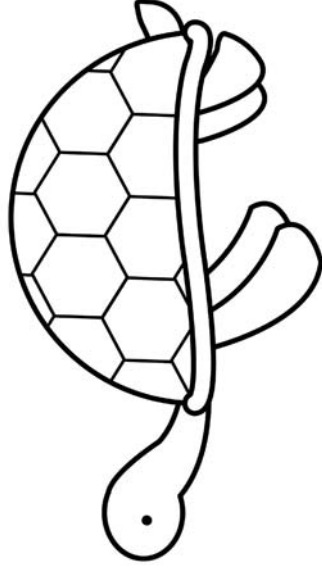

Turtle Habitat

- Each kind of sea turtle has a specific geographic area where they nest, breed and live.
- Sea Turtles on the Reef Sea turtles like warmer, tropical waters.
- Adult sea turtles spend most of their lives in shallow waters, only going on beaches to lay eggs.
- When sea turtles look for food or a mate they can travel thousands of miles through the sea.
- Most sea turtles live their whole life alone, only interacting with others when it's time to mate.
- Baby sea turtles sleep floating on the surface of the water with their fins behind their back.
- Adult sea turtles can sleep on the bottom of the ocean by wedging themselves under rock ledges.
- To create a nest for eggs, females dig a pit in the sand using their flippers and body.

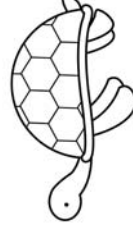

Take the quiz!

1. How Heavy is the largest Sea turtle?
2. How much do small adults weigh?
3. What do adult sea turtles spend most of their time doing?
4. What do female turtles do to create a nest for their eggs?
5. How many types of sea turtle species are there and can you name them?
6. What type of sea water do turtles on the Reef prefer?
7. Describe how baby sea turtles sleep?
